# akkar story

Istanbul facilities in 3 different location equipped with advanced technologies

It was the year 1985 when Akkar was first founded as a small manufacturing facility in Istanbul that focused entirely on producing parts for the shotgun and automobile industries. Doors to the international gun industry became wide open shortly after it started producing and distributing the first pump-action and gas-operated semi-automatic shotguns, Karatay and Altay in 1992. This unarguably paved the path for other Turkish gun manufacturers to establish business deals with American Colleagues and elsewhere around the world.

Along the way, Akkar partnered with other names and began producing break open shotguns under its own Churchill brand. When its lightweight 206 series launched in 2005, with its classical look and ergonomic features, the Akkar brand was propelled into the mainstream of gun manufacturers. Its reputation was assured with the arrival of the Mammut 300 series, the much-talked-about three-barreled shotguns. And in 2012, Akkar introduced the 800 series, which furthered their momentum in the international gun market.

Akkar's production ethic proudly follows the SAAMI standards and also tested and recognized by C.I.P. standards for being compatible with steel shots as

environmental awareness is rapidly rising against lead pellets polluting the nature. Akkar follows advanced international safety, management and production standards including AS9100.

Akkar has registered and certified R&D Center, design and development department, prototype making, CNC machining, heat treatment, coating, brazing and assembly departments.

Having been established as a globally reputable gun maker in the market and with its adamant quality control policy probably explains why %98 of it's production is exported to over 50 countries. Additionally, as a reliable partner, it has been successfully manufacturing accessories, parts and full bodied shotguns for world-famous brands and law enforcement organizations.

Today Akkar's shotgun collection includes a well-balanced offering of sporting, hunting and tactical designs that are produced in different gauges and calibers under 14 registered trademarks including Churchill®, Mammut®, Altay®, Karatay®, Maxi-Mag®, M-2000®, Armstrong®, Apache®, Komanchi®, Poseidon® and Polaris®.

## 800 Series

Over & Under

### State of the Art

800 series was developed by Akkar based upon new user demands, and came with production line improvements and performance related innovation. This included an over under made of steel that was light, that had lower profile, and a modern sleek look. Special alloy hammer forged steel receivers are milled in such a way as to leave only what is necessary on the action bar while achieving a non-traditional appearance. That enabled a compact and low profile design with lighter weight.

OxyCAP is Akkar’s surface hardening (heat treatment) process. It is not a conventional coating technique but a special and long process during which steel receiver and action parts are treated with the Akkar Formula. This unique heat treatment furnace was co-designed and produced by Akkar R&D Center and Prominent Metallurgical Engineering Scholars.

OxyCAP treatment results in a high level of Abrasion, Corrosion and Impact resistance that is crucial in the world of guns, for both functional and aesthetic reasons. One of the side benefits of this process is that the specially hardened surface creates an ultra-slip-pery non sticky environment that makes it hard for unwanted dirt and residue to stick, hence making cleaning and maintenance much easier.

A detailed advertisement for the Churchill 500 Series side-by-side shotgun. The image features a high-quality, close-up photograph of the shotgun, showcasing its dark wood stock and receiver, and the polished metal barrels. The brand name 'Churchill' is engraved on the receiver. In the foreground, three shotgun shells are displayed: two with green heads and one with a red head. The background is dark and reflective, creating a sophisticated and elegant atmosphere. The text 'Churchill' and '500 Series' is prominently displayed in the upper left corner, with 'Side by Side' written below it. The overall composition emphasizes the craftsmanship and reliability of the firearm.

# Churchill

# 500 Series

Side by Side

## Reliability and Elegance

The 500 series exemplifies Akkar's dedication to manufacturing excellence. Its timeless appeal and balanced performance continue to satisfy the urges of discriminating hunters.

Truly graceful and humbly sophisticated side by side shotguns include the actions and receivers are milled at home from hammer forged steel followed by surface hardeningour heat treatment process. Though the receivers are hammer forged steel the guns are very light due to their unique design.

Available in 12-20-28 ga and cal. .410. Barrel Length options 51-61-66-71-76 cm.

Akkar facilities use state of the art manufacturing techniques and high-end CNC machines to ensure minimal tolerance for reliable performance.

# mammut 300 Series

Triple Barrel

## Unapoligetic

First in the world for its innovative configuration.  
Exorbitant contribution to history of Gun Making.

One significant feature of the Mammut triple barrel shotgun is the barrel configuration, as two bottom barrels are laid a little further apart than on most side-by-sides that makes the top barrel fitting on top lower than on an over-and-under that creates a slimmer vertical profile. Hence the reduced height of corresponding standing-breech adds a greater strength to the gun.
